BOOST & TRACK STUDENT INVOLVEMENT

The positive relationship between student involvement in co-curricular activities and academic performance and future professional success is well documented. But the ability for universities to systematically and efficiently engage and track student involvement remains a challenge. Campus Bubble is designed to overcome this challenge.

A PRIVATE, BRANDED SOCIAL COMMUNITY

Campus Bubble provides visually compelling, private label online communities to universities that serve as the hub for students to communicate, interact and collaborate with each other. These private social networks allow students to build relationships, and discover and express their academic identity. It also allows universities to track, manage and optimize student engagement.
